Convert Lightwave Scene files with European numbering system to US system

If you are using a PC that has a numbering system like : **12.345,00** then Lightwave 10.0 or 10.1 will not load scenesfiles you receive from other countries correctly.

To solve this you need to set your windows Regional settings to a numbering system like : **12,345.00** . The decimal point needs to change from a , (comma) to a . (period).

This allows you to load up scenefiles from others, but now you cannot load the scenes you created earlier with LW 10.0 or 10.1. To convert those scenefiles, I have setup a website that converts these scenefiles. It will convert all **12.345,00** to **12,345.00**.

You can find the website [here](#) (free and no user registration required).
